                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Š
                                              The present sequence represents a multiple sclerosis (MS) associated retrovirus (MSRV) genomic fragment used in the method of the invention. The invention provides complete or partial sequences of the MSRV-1 pol gene, gag gene and env gene, and polypeptides encoded by these genes. The invention also provides antibodies raised against the pulpaptides. The genomic sequences, polypeptides and antibodies are also claimed useful for diagnosing infection by MS and rheumatoid arthritisassociated viruses, and also for prevention and treatment of infection
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        240

          This sequence represents clone 5M6 from a novel multiple sclerosis related virus type 1 (MSRV1). The sequence can be used in diagnostic, prophylactic or therapeutic compositions to inhibit expression of a multiple sclerosis related virus and/or virus associated with rheumatoid polyarthritis. (Updated on 27-ANG-2003 to correct OS field.) (Updated on 17-OCT-2003 to standardise OS field)

                                                                        ઠે
         The invention relates to an isolated or purified nucleic acid from a virus associated with multiple sclerosis and/or rheumatoid arthritis, antitiple sclerosis-associated virus (MSRV):1. The nucleic acids comprise pol, gag or reverse transcriptase genes (or their fragments) encoding the proteins or defined peptides (including immunodominant peptides.

CC detecting a virus associated with multiple sclerosis or rheumatoid arthritis in a biological sample, a nucleic acid probe for the detection of a virus associated with multiple sclerosis or rheumatoid arthritis, a primer for the amplification by polymerisation of a nucleic acid of a viral material associated with multiple sclerosis or rheumatoid arthritis, a cr viral material associated with multiple sclerosis or rheumatoid arthritis, a cr viral material associated with multiple sclerosis or rheumatoid or arthritis, a polypeptide exhibiting an inhibitory activity from MSRV, and an antibody directed against the MSRV-1 virus obtained by from MSRV, and an antibody directed against the MSRV-1 virus obtained by completed immunogenic agent consisting of the antiganic polypeptide defined above. The nucleic acids are useful for detecting a biological sample a virus associated with multiple sclerosis or rheumatoid arthritis, or for detecting in a biological sample, the presence of or exposure to a virus associated with multiple sclerosis or rheumatoid arthritis. The present constantely determined. Note: The SEQ ID numbers for the sequences as displayed in the main body of the patent do not match the SEQ ID numbers constant the sequence listing consequently those sequences mentioned in the main and analyse in pare intended to claim.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             180

8 X C C C g 셤 원 g g a 셤 셤 셤 셤 원 셤 g g g ò ò ò ò à ò ò à ò ò 8 8 ò ò ò à The present invention describes a method (M1) for screening for an antineoplastic agent. The method involves exposing cells to a chemical agent to be tested for anti-neoplastic activity, determining a change in expression of at least one gene (I) of a signature gene set, where (I) comprises a sequence (S) selected from 847 sequences (given in ABL61664 to ABL70110), or is at least 95% identical to (S), where a change in expression is indicative of anti-neoplastic activity. (I) has cytostatic activity and can be used in gene therapy. M1 can be used for screening an arti-neoplastic agent, and can be used for producing a product which is the data collected with respect to the anti-neoplastic agent as a result of M1, and the data is sufficient to convey the chemical structure and/or properties of the agent. M1 can be used in the treatment of cancer such as colon, breast, stomach, lung, thyroid, oseophageal, ovarian, kidney, prostate or pancreatic cancer, adenocarcinoma, carcinoma, clear cell Screening for anti-neoplastic agent involves exposing cells to a chemical agent to be tested for anti-neoplastic activity, and determining a change in expression of a gene of a signature gene set. Also described: (1) a vector comprising (I); (2) an expression vector comprising (I); (1); (3) a host cell genetically engineered to comprise (I) which is operatively associated with a regulatory sequence that modulates expression of (I) in the host cell; (4) a polypeptide (II) encoded by (I); (5) a composition comprising the polypeptide of (4) and a carrier; (6) an antibody directed against the polypeptide of (4); (7) detecting (I) or the polypeptide of (4); in a sample; (8) identifying a compound that binds to the polypeptide of (4); (9) producing the polypeptide of (4); and (10) a collection of polynucleotides comprising at least one of the polynucleotide sequences (I). The polynucleotides (I) can be used as hybridisation probes, oligomers or primers, for chromosome or gene mapping, for the recombinant production of proteins, and for generating antisense DNA or RNA. The

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to new nucleic acid sequences of human endogenouse retrovirus, HERV-7q, which is located on chromosome 7q. Regulatory elements associated with HERV-7q may alter expression of other genes (even remote genes) on the same chromosome, inducing immunological and/or neurological changes (which may be pathological or protective/curative). HERV-7q peptides can be used to improve efficiency of the immune response, e.g. in immunocherapy. HERV-7q peptides and their coding sequences can be used in immunogenic or vaccinating compositions, for protection against autoimmune diseases, particularly multiple sclerosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            nucleic acid sequences of human endogenous retrovirus, HERV-7g, usdiagnosis, treatment and prevention of autoimmune and neurological

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomeras, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed sequence tags for identifying expressed activity of (II) to useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     740
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               859
polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic coding sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Accedentational and an article and a second and a second and a second and a second and a second and a second and a second and a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a second a se
